For immediate release: iQ Power Tools, manufacturer of premium power tools with integrated dust collection technology, presents the **iQMS362**, the newest in the iQ360 line of masonry saws. Whether the materials are small or large, this tool is designed to save cutting time and increase productivity.

Durable and portable, the **iQMS362** is built to tackle any jobsite. The **iQMS362's 16.5" Q-Drive blade** was engineered specifically for this tool. Tests have shown this blade cuts up to 40% faster than its competitors and with more accuracy. The Q-Drive blade cuts masonry materials in a wide range of shapes, sizes, weights, and densities; from soft, manufactured stone to very dense pavers or granite.

As if that isn't enough, the **iQMS362** eliminates the dust cloud, allowing workers to increase their efficiency and productivity while staying compliant with the new OSHA regulations. The **iQMS362** was designed with the health and safety of its operator in mind, meeting the OSHA Silica Permissible Exposure Limit (PEL) of 50 micrograms of respirable crystalline silica per cubic meter of air ($\mu\text{g}/\text{m}^3$), averaged over an eight-hour day.

The **iQMS362** features the following industry firsts:

- 16.5" Q-Drive blade with a 5.5" depth and a full 24" length of cut
- IQ Power Management System allows the saw to run on 120 volts and 20 amps
- 270° Dust Reduction System
- 3 Stage Cyclonic Filtration
- Easy Transport System includes high-flotation tires, an integrated stand with gas-shock lifting/lower mechanism
- OSHA Silica PEL compliant

The **iQMS362** was designed to overcome common power limitations of most high-powered masonry saws which operate on 220v of electricity. It operates using a standard 120v and 20 amps, eliminating the need for a 220v plug adapter or high-output generator. Integrated with soft start technology, the iQ Power Management System controls the power ramp up without the spike.

Attendees at this year's Hardscape North America in Louisville, Kentucky, October 17-19, 2019 can see the iQMS362 in action at iQ Power Tools' Booth #24011.

With unrivaled portability, cutting performance and speed, the **iQMS362** is the ultimate saw for serious masonry and hardscape professionals.

About iQ Power Tools

iQ Power Tools manufactures a comprehensive range of premium power tools with integrated dust collection systems for the concrete, masonry, hardscape and tile sectors. The company was founded by third-generation masons Joel and Paul Guth, who have logged over 30 years each in the masonry industry. Decades of experience taught them about dust problems; their company started out creating tools to solve their own problems only to realize these same issues affected all contractors... mess, money and a threat to the health and safety of the industry. iQ Power Tools envisions a future where their innovation helps create a 100% dust-free environment: jobsites are safer, work practices are healthier... and, the construction industry becomes even more sustainable.
